

XPECTRA launches its Nevula IoT Platform

August, 2020.

Xpectra, in response to market needs and recent technological advances, launches a new service, with its Nevula IoT Platform, which will address the need to interconnect a wide variety of IP devices to send information. Deepening the concept and facilities provided by the Internet of Things, the Nevula IoT solution integrates devices through wide-range and low-consumption networks to a cloud platform that includes tools to be used from any location with an internet connection, the client can access from a PC or a mobile device to alerting events originated by IoT devices. This secure, robust and high availability platform becomes part of the offer that Xpectra proposes to the Monitoring Centers, such as ADT and RCU, as well as the Financial, Retail and Industrial Sector, who have expressed their interest in the solution and its possible applications.

In this way, Xpectra provides agile, easy-to-implement services at a low cost, providing flexible technology solutions that meet market needs.
